

Oral and Dental Research Trust Oral Health Innovations Research Grant 2016-2017

The Oral and Dental Research Trust is pleased to announce a new grant scheme funded by *Oral Health Innovations Ltd*, the UK provider of PreViser Clinical Risk and Disease Assessment technology

The ODRT is seeking applications for small grants to support research programmes into the prevention of oral diseases with a specific emphasis on chronic diseases of ageing and patient-orientated research.

Four grants are available to Dental Professionals and Scientists up to a maximum of £5000 per award

Applications from the UK comprising

- Structured applications of no more than 2 sides of A4 giving the background to and detail of the proposed research programme
- 1 side of A4 detailing and justifying the financial expenditure
- An "Impact Statement" is also required to indicate how the research may benefit patients now or in the future.

should be submitted electronically to the Administrative Officer of the ODRT, Mrs Pam Howson, howsoncrew@aol.com by 28th February 2017.

You will receive e-mail confirmation that your application has been safely received. If you do not receive confirmation, please assume your submission has not arrived and contact us. Safe receipt of applications is the responsibility of the applicant and, should you be unable to demonstrate an acknowledgement, ODRT will not accept that a submission has been made.

This programme is designed to provide support for **patient-orientated** rather than basic research, and research that focusses on prevention in the broadest context. It is not designed to provide "top up" funding for existing projects, but to encourage new and innovative projects that have patients at their core.

The Oral and Dental Research Trust is now an NIHR non-commercial Partner and as such studies funded by this scheme are eligible for consideration for inclusion onto the NIHR Portfolio.

The results of this award round will be announced during the annual meeting of the BSODR.

This programme is supported by a generous donation from Oral Health Innovations Ltd.
